ECOR 1606 Lab #8

Note: This lab is mandatory for all students who did not get at least 8/10 as their mark in the submit program for their lab midterm test (Lab #7). In other words if you got 7/10 or less, or if you missed the midterm lab test for any reason, you must attend the lab. It is optional for those who got 8/10 or higher.

Submit your work as "*lab8.cpp*" to prove your attendance at the lab.

The "*labmidterm*" folder in G:/1606 contains the lab midterm tests and sample executables for all lab sections.

1. Correct Your Mistakes:

Retrieve your lab midterm (view and then save from within the submit program). Open it in Dev-C++ and get the program working correctly.

2. Add Some Functions:

To prepare for the final lab test, add one or more functions to your program. For example, you can write a function to evaluate each formula. You can also write a function to check if the input is valid or invalid, i.e. a Boolean function that returns true if the input is valid and false otherwise.

Note that you should submit file "*lab8.cpp*" at the end of the lab to prove your attendance at the lab, even if you have not completed all of the steps above.
