CST8285 – Assignment #3: Make it pretty with CSS [4%]

This assignment relates to the following Course Learning Requirements:

CLR 1: Write program code using structured programming, and top-down coding techniques
CLR 5: Modify an existing program according to program specifications

Objective of this Assignment:

The aim of this assignment is to add CSS style to the two pages (Assignments #1 and #2) already created within your project.

Pre-Assignment Instructions:

Big picture

By now, you have two pages created (aboutme.html and contactus.html) but are plain HTML language with no style. In this assignment, you will add the style factor by developing a .css document, implementing every entry in the .css file by incorporating them within your html file and linking it to the html documents.

Assignment Tasks:

Challenge

- Open the enclosed style.css file where it contains instructions within in order to create the style elements required.
- Link this file to both developed html files.
- Implement the new styles added by adding them within your .html elements.
- Once you are finished with your html file, you need to validate it and make sure no errors remain.
- Submit it through Brightspace's Module 4 - Assignment 3

Reminders

- It is important for you to use a regular text editor like a Visual Studio Code (VS Code), Notepad, Notepad++ or something very similar to this and not an IDE; i.e. no Eclipse, no Dreamweaver and nothing like these fancy programs. I highly recommend using VS Code. Using other than a standard editor will result in a zero.

What to submit *(through Brightspace)*

In **one zip file**, please include the following files (no need to rename the .html file since they are inside a zip):

<aboutme.html>
<contact.html>
<style.css>
<any picture or related file>
